Circle one answer for Questions 1 and 2. Write 1-2 complete sentences for Question 3.

Situation
Maya's little brother says the family's robot vacuum is artificial intelligence because it turns around when it hits a wall. Maya isn't sure that counts.

1. What makes a machine rule-based instead of machine learning?

(A) It runs without needing the internet.

(B) A person wrote out the steps it follows.

(C) It was built more recently than other machines.

2. What is a model in machine learning?

(A) The list of rules a programmer typed out.

(B) The example a machine was shown the most.

(C) What a machine ends up with after finding patterns.

3. Is turning around at a wall enough to make something machine learning? Explain what would make it machine learning instead. Write 1-2 sentences.
