## SINGLE-POINT RUBRIC: CHECK YOUR OWN WORK FIRST

FOR STUDENTS

Same four skills, one clear target for each. Before you turn anything in, read the middle column and be honest: does your work hit that bar yet? Use the right column to note what you still want to fix.

Name \_\_\_\_\_

Project \_\_\_\_\_

| Criterion                 | What strong looks like                                                                    | Feedback |
|---------------------------|-------------------------------------------------------------------------------------------|----------|
| Technical accuracy        | My facts, numbers, and course concepts are correct and used the right way.                |          |
| Decision & reasoning      | I make one clear decision and back it with real evidence and tradeoffs, not just opinion. |          |
| Communication             | Someone new could follow my work and act on it without asking me questions.               |          |
| Process & professionalism | I met the deadline and the constraints, and I did my share of the work.                   |          |

Check every box you can honestly check. Any box you leave blank is your best clue for what to fix in the time you have left.

- ☐ My technical work is accurate and I can explain every number.
- ☐ I make one clear decision, not a maybe.
- ☐ I defend that decision with specific evidence and at least one tradeoff.
- ☐ A stranger could follow my work without me talking them through it.
- ☐ I met the deadline and every constraint in the assignment.
- ☐ I contributed my fair share and my part is finished.

ONE THING I WILL IMPROVE BEFORE I TURN THIS IN
